

Hymns

Service playback — quick guide

This app plays the hymns for the service. There are no settings to fuss with — you type a hymn number or tap a part of the service, then press **Play**. Hymns download the first time you use them and are then saved on the iPad, so they play even without internet.

The screen at a glance

- **Five buttons across the top** — the parts of the service: **Prelude**, **Opening**, **Memorial**, **Closing**, **Postlude**.
- **Number pad** (right) — type a hymn number.
- **Player** (left) — the big number, progress bar, and play controls.
- **Bottom row** — where the sound is going (left) and the volume (right).

The main screen, line-up ready (all green).

What the button colors mean

Green	Ready to play.
Red	Not set yet, or there's a problem (e.g. no internet on first use).
Yellow	You're typing a number for that slot, or it's downloading.
Gray	Not available yet (e.g. Prelude before any hymns are set).

Play any hymn right now (“Play Now”)

Use this for a one-off hymn outside the service line-up.

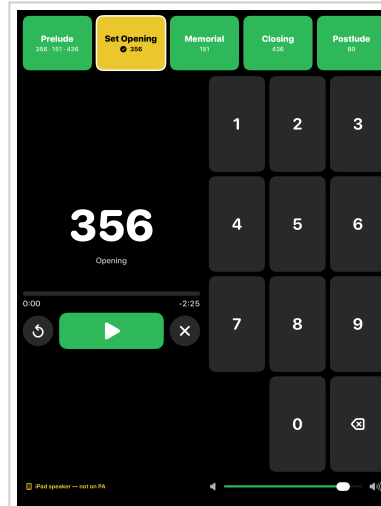

- 1 Type the hymn number on the pad.
- 2 Choose **Piano** or **Choir** with the toggle above the pad.
- 3 Press the big **Play** button. Press again to pause; the round arrow resets to the start.

Setting up the Sunday line-up

Program the three congregational hymns — **Opening**, **Memorial**, **Closing**. Each plays the **choir** version.

- 1 Tap the part of the service (e.g. **Opening**). It highlights.
- 2 Type the hymn number. The button reads “Set Opening”.
- 3 Tap the **same button again** to set it — it turns green with the number.

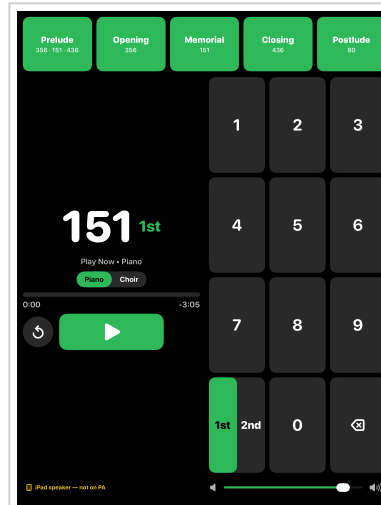

To back out without setting, tap × (next to Play). That same × also returns you to Play Now when a part is selected.

Mid-edit: tap “Set Opening” again to confirm.

Hymns with two tunes (1st / 2nd)

A few hymns have two different tunes. When you type one of those numbers, a **1st | 2nd** selector appears in the empty pad space (left of 0), and a green **1st** or **2nd** shows next to the big number. Pick the tune before you play or set it.

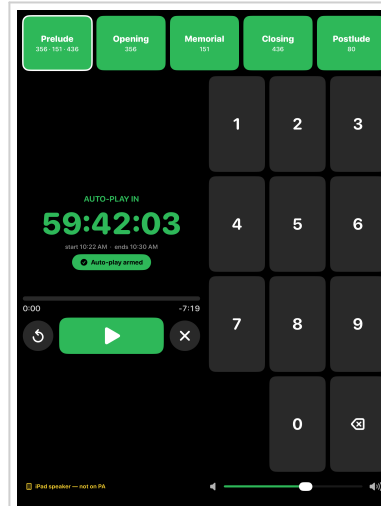

Hymn 151 with the 1st / 2nd tune selector.

Prelude — and the 10:30 countdown

Once all three hymns are set, **Prelude** plays their **piano** versions back-to-back. Select Prelude and the player shows a live countdown:

- **PLAY IN ...** — when to press play so the prelude ends right at **10:30 AM**.
- **start ... · ends 10:30 AM** — the exact clock times.

Hands-free? Tap **Auto-play** — it turns green (“armed”) and the prelude starts itself at the right moment. Touching Play, Reset, or another part cancels it.

Prelude countdown with Auto-play armed.

Postlude

Postlude is a short clip built into the app. Each time you select it, it loads the next clip in rotation — just press **Play** when you're ready.

During the service

- **It moves to the next part on its own.** When a hymn finishes, the app selects the next part (Prelude → Opening → Memorial → Closing → Postlude) and gets it ready — but it does **not** start playing. You press Play when it's time.
- **Volume sets itself.** Selecting Prelude or Postlude sets volume to about 60%; selecting a hymn sets about 90%. You can always nudge the slider, and it won't change while audio is playing.

Sound, volume & the PA

- The **volume slider** (bottom-right) is the iPad's volume — the same as the side buttons.
- The **bottom-left label** shows where sound is going: **green “Output: ...”** means it's reaching the PA through the USB-C adapter; **yellow “iPad speaker — not on PA”** means it's coming from the tablet. Make sure it's green before the service.
- Keep the iPad plugged into the USB-C audio adapter (it charges at the same time).

Your line-up is saved

The three hymns you set stay put even if the app is closed and reopened. And once a hymn has been played once, it's stored on the iPad and will play later even with no internet.

Tip: nothing you tap can break anything — if a button looks wrong, tap × to go back to Play Now and start again.
